

AutoComp Elite[®] Customer Testimonials

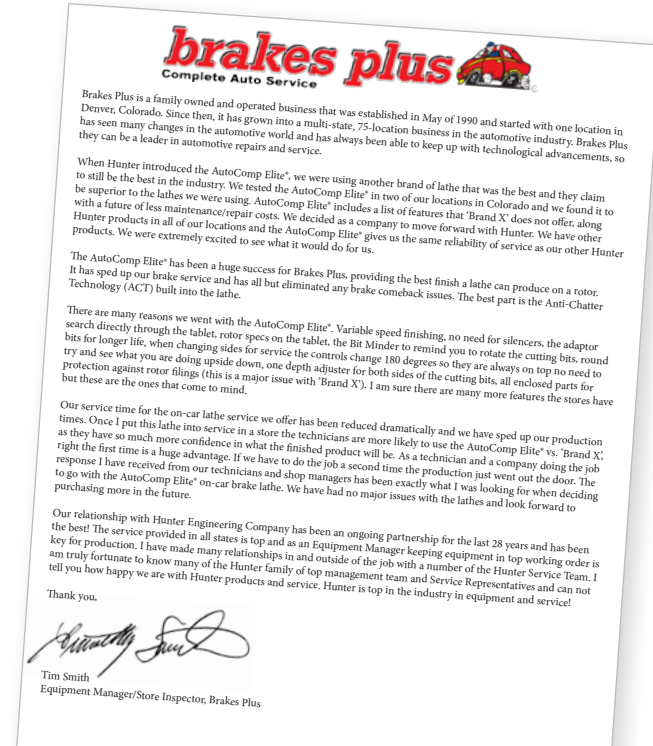

Brakes Plus Denver, CO

“Once I put this lathe into service in a store, the technicians are more likely to use the AutoComp Elite® vs. ‘Brand X’ as they have so much more confidence in what the finished product will be.”

Tim Smith
Equipment Manager/Store Inspector, Brakes Plus

BMW of Freehold

Freehold, NJ

“I can't stress enough the time-savings that we are seeing with this machine. It takes about half as much time to learn and with a team of 25 technicians, I need an on-car brake lathe that is easy to learn and operate.”

BMW Center **BMW of Freehold**

I started as a Technician in 1977 and have been the Shop Foreman at BMW of Freehold for 15 years now. BMW saw the value in resurfacing customers' rotors rather than replacing them, so they made an on-car brake lathe mandatory equipment. To comply with the program, we invested in a 'Brand X' brake lathe, but after less than a year we realized it wasn't going to do the job. When we saw the features and ease-of-use of the AutoComp Elite® we knew we had to make the switch.

I can't stress enough the time savings that we are seeing with this machine. It takes about half as much time to learn and with a team of 25 technicians, I need an on-car brake lathe that is easy to learn and operate. It is also simpler and more intuitive. The AutoComp Elite® works much faster under real world conditions and you don't have to perform multiple cuts on the disc brake like other machines. The techs love using it as well.

The Hunter Team is always there to help with any training questions we have. We can count on them to have no delay in getting back to us. The support of our local Hunter Representatives is a major plus for all of our Hunter equipment.

The AutoComp Elite® has many features that made it a clear choice for our shop. Anti-Chatter Technology (ACT) is the best feature and really can't be beat. In my years as a mechanic that is something I have never seen. You don't have to use chatter bands or silencers to ensure a smooth cut. Hunter equipment is way ahead of the pack. The AutoComp Elite® is also very easy to keep clean which is a huge plus.

The touchscreen interface is far superior to other operation interfaces. It is a true display allowing you to see what the machine is doing and monitor the progress of your cut. Bit Minder is also very helpful for tracking our bit usage and our bit life often exceeds the service team's expectations. Simply put the AutoComp Elite® is a good return on investment.

Weeks Chevrolet Buick GMC

West Frankfort, IL

“With variable-speed drive, we can avoid differential lock-ups by lowering the cutting speed. This allows us to handle any car that comes in, even large medium-duty trucks and difficult vehicles. The powerful motor helps us avoid the need to drop driveshafts which saves us a lot of service time.”

Justin Sailliez
Service Manager, Weeks Chevrolet Buick GMC

Weeks Chevrolet Buick GMC has been family-owned and operated for over 40 years providing the best new and used Chevy, GMC and Buick models to West Frankfort and Marion in Franklin County, IL. I started at Weeks about 21 years ago doing oil changes, then worked to be an ASE Certified Master Technician and now I am the Service Manager at Weeks in West Frankfort.

After seeing the AutoComp Elite® in action, it is impossible to ignore the benefits and time savings of this on-car brake lathe. With the AutoComp Elite® our brake service is much faster.

With variable-speed drive we can avoid differential lock-ups by lowering the cutting speed. This allows us to handle any car that comes in, even large medium-duty trucks and difficult vehicles. The powerful motor helps us avoid the need to drop driveshafts which saves us a lot of service time.

Not only that, the AutoComp Elite® performs the cut faster and chatter free. In just a short time, it has become our go-to machine for every brake job.

Our Hunter Team has been great. They are extremely reliable and always respond to our calls and questions quickly. With the local service support, we can avoid any downtime.

When it comes time to choose new equipment for the shop, we go to Hunter.
